

Part C: Data Request

Dataset 1: Streaming Viewing Logs

The first dataset will help us track the consumption behaviour of a piece of content. The data that is required should have the following data dictionary attached to it. To save on compute we aim to aggregate the events as a count of events per title per day. Please provide 3 years' data

Column name	Data type	Example	Additional information
Household ID	STRING	C8E538EW	Unique anonymised household id
Session ID	STRING	A8F932BC	Unique anonymised watching session identifier
Event Timestamp	TIMESTAMP (EPOCH)	1788600793	The exact date and time the event took place
Title ID	STRING	STAD-MOV-1042	The unique ID for the title
Event Type	STRING	Play	The event that took place during the watching session Must be one of - Play - Pause - Scroll - Abandon
Watch Duration	INT	3400	The total time spent watching a title in seconds when the type is

			"Play" or "Pause".
Title Runtime	INT	5000	The runtime of a title in seconds

Dataset 2: Search Queries

This dataset will help us understand the current demand for content. We have asked for data that also shows what results, if any, the queries return. This will help us to establish the relationship between what is being watched due to queries. We will apply spelling corrections to the text where possible. Please provide 2 years' data

Column name	Data type	Example	Additional information
Session ID	STRING	A8F932BC	Unique anonymised watching session identifier
Search Timestamp	TIMESTAMP (EPOCH)	1788600793	The exact date and time the search took place
Search Term	STRING	"spiderman no way home"	Text typed into the search bar by the user.
Result Clicked	STRING	STAD-MOV-9981	The Title ID of the result the user clicked on, if any
Top 5 Results Returned	ARRAY	STAD-MOV-9981, STAD-SER-102, STAD-MOV-443, STAD-MOV-557, STAD-SER-112	The top 5 Title IDs returned by the current search engine for the query.
Zero Results	BOOLEAN	True	Whether the search

Returned			query returned a zero results
----------	--	--	-------------------------------

Dataset 3: Content Catalogue

This dataset provides both the content available as well as the metadata surrounding the content. Please provide the current catalogue and historical acquisitions from the last 6 years.

Column name	Data type	Example	Additional information
Title ID	STRING	STAD-MOV-1042	Must match the Title ID used in Dataset 1 and Dataset 2.
Title Name	STRING	The Dark Knight	The official, correctly spelled name of the movie or series.
Acquisition Date	DATE	2024-01-15	The date the content was licenced
Content Type	STRING	Movie	Type of content like: Movie, Series, Documentary
Licensing Cost	FLOAT	150000	Cost of licensing in USD
License Expiry Date	DATE	2026-10-30	The upcoming renewal date
Release Year	DATE	1980	The year the content was released
New Title	BOOLEAN	True	A flag to show whether this is the

			first time a title has been licensed
--	--	--	--------------------------------------

Dataset 4: themoviedb.org External Metadata (Iterative Warehouse)

Note for Client/Stakeholders: STADIOChoice does not need to provide this data. We scrape it from [themoviedb.org](https://developer.themoviedb.org/docs/getting-started) Documentation: <https://developer.themoviedb.org/docs/getting-started>

To prevent API rate limits and avoid high computational cost of scraping IMDb during model training, we will build this dataset iteratively based on the content catalog and store it in a local data warehouse. This external data will be mapped to the internal Title ID. There is a cost associated with this but due to the way we are doing this costs will be minimal.

Column name	Data type	Example	Additional information
tmdb ID	STRING	tt0468569	Identifier of from the IMDb API
STADIO Title ID	String, alphanumeric	STAD-MOV-1042	The foreign key to join this data with other tables
Genres	STING	Action, Crime, Drama	Used as features to cluster titles and find relational similarities.
Lead Actors	ARRAY	Christian Bale, Maggie Smith	List of actors who are leads in a title to help build the relational similarities
User Score	FLOAT	0.89	A global proxy for content popularity and perceived

			quality.
Original Language	STRING	English	The original language of the title
Network	STRING	Netflix	Help us rule out exclusive content.
